

Forensics Friday, August 9, 2019

This figure should be sent back for revision. Since it suffers from jpg compression, the authors should scan/export images at a minimum of 300 dpi as a tif. They should also demonstrate equal loading in the lanes.

And a stain of the membrane with PonceauS or Coomassie would be nice too!

Here are a few resources on how to best present figures and avoid having yours look like a [#ForensicsFriday](#) post:
